

Table 10: Mean excess returns of 25 portfolios sorted on duration and residual institutional ownership

	Low Dur	D2	D3	D4	High Dur	D1-D5
Low RIOR	0.82 (0.64)	0.71 (0.58)	0.66 (0.54)	0.74 (0.58)	0.26 (0.80)	0.56 (0.49)
RIOR2	0.86 (0.66)	0.56 (0.58)	0.89 (0.54)	0.86 (0.53)	0.84 (0.74)	0.01 (0.50)
RIOR3	0.59 (0.75)	0.81 (0.61)	0.90 (0.53)	0.85 (0.56)	0.61 (0.72)	-0.02 (0.50)
RIOR4	1.16 (0.74)	1.07 (0.70)	0.95 (0.52)	0.78 (0.58)	0.90 (0.73)	0.26 (0.53)
High RIOR	0.74 (0.88)	0.76 (0.70)	0.62 (0.59)	0.59 (0.56)	0.38 (0.71)	0.36 (0.59)
RIOR1-RIOR5	0.09 (0.43)	-0.05 (0.32)	0.04 (0.21)	0.15 (0.20)	-0.12 (0.38)	0.20 (0.55)

Notes: Sort years are 2015-2024; monthly returns cover July 2015 to June 2025 (120 months). The sample has 19,703 stock-year assignments and about 1,913 stock-month observations per return month across cells. Returns and standard errors are monthly percentages. Standard errors are intercept-only OLS standard errors. RIOR is computed from SEC 13F holdings with Weber Eq. (7): clipped logit IOR residualized on log market equity and squared log market equity by year. The local SEC 13F data cover report years 2014 onward, so this is a post-2014 methodology reproduction rather than Weber's 1981-2013 TR-13F sample.
